

James 4:14—	ημων υμων	K^r [K^r is independent] K^x ∓A(P ¹⁰⁰ B)
James 4:14—	επειτα επειτα και επειτα δε και	K^r [K^r is independent] ∓AB K^x
1 Pet. 3:16—	καταλαλουσιν καταλαλωσιν καταλαλεισθε	K^r ∓AC, sy ^p , bo [K^r is independent and ancient] K^x P ⁷² B, sa
1 Pet. 4:3—	υμιν ημιν (omit)	K^r ∓bo [K^r is independent and ancient] K^x C P ⁷² AB, lat, syr, sa
2 Pet. 2:17—	εις αιωνας εις αιωνα (omit)	K^r [K^r is independent] K^x AC P ⁷² ∓B, lat, syr, cop
3 John 12—	οιδαμεν οιδατε οιδας	K^r [K^r is independent] K^x ∓ABC

So what conclusions may we draw from this evidence? **K^r** is independent of **K^x** and both are ancient, dating at least to the **IV** century.¹ A few of the examples could be interpreted to mean that **K^r** is older than **K^x**, dating to the **III** and even the **II** century, but I will leave that possibility on the back burner and look at some further evidence. The following examples are based on *Text und Textwert* and the IGNTP *Luke*.

Luke 1:55—	εως αιωνος εις τον αιωνα	K^r C [K^r is independent and V century] K^x ∓AB
Luke 1:63—	εσται εστιν	K^r C [K^r is independent and V century] K^x ∓AB
Luke 3:12—	υπ αυτου και — — και	K^r C [K^r is independent and V century] K^x ∓ABD

¹ Someone may object that it is the readings that are ancient, not the text-types; but if a text-type is clearly independent, with constantly shifting alignments among the early witnesses, then it has ancient readings because it itself is ancient. And in the case of **K^r** there are many hundreds of variant sets where its reading has overt early attestation. (Recall that Aland's **M** and Soden's **K** include **K^r**—the poor text-type itself should not be held responsible for the way modern scholars treat it.) If it can be demonstrated objectively that a text-type has hundreds of early readings, but it cannot be demonstrated objectively to have any late ones, on what basis can it be declared to be late?
