

variety of pieces, here and there). Codex C is missing basically chapters 4 and 5 of James, 1 Peter and 1 John [curiously, the same two chapters for all three books], as well as all of 2 John. Of course, P⁷² has only 1 & 2 Peter and Jude. 0173 is the only one of them that never sides with f³⁵: Out of the total of 795 variant sets, f³⁵ receives overt early attestation 77.9% of the time (619 ÷ 795).

Before drawing conclusions, I present the evidence (only combinations with at least one instance are tabulated). In passing, let me say that having neither secretary nor proof-reader, I do not guarantee complete accuracy, but a slip here or there will not alter the big picture, nor invalidate my conclusions.
