Key:

+++	around 20% = f³⁵ virtually alone = diagnostic (78)
+-	around 25% = quite good (53)
++	around 30% = not bad (35)
+-	around 35% (10)
+	around 40% (4)

Total: 180

It should be obvious to any unbiased reader that **f³⁵** is entirely independent of the Byzantine bulk (Soden's K^x). Of the 180 variant sets, **f³⁵** is alone 75 times (42%), so it is independent of the lines of transmission represented by the early MSS that I included, as well. If **f³⁵** is independent of the Byzantine bulk, then it cannot be a revision based on that bulk—at any time! Before commenting further, I will list the early support for the readings that I classify as ‘diagnostic’ and ‘quite good’, identified as +++ and +- (25% or less), respectively.

P ⁴⁵ – 1	P ⁵³ A, C – 1	Total times each:
℣ – 2	℣, A, B – 7	P ⁸ – 1
A – 9	℣, A, D – 1	P ⁴⁵ – 5
