

f³⁵ readings. Family 35 represents about 16% of the total of extant MSS, but it is almost never entirely alone. However, as illustrated below, the sprinkling of other MSS is almost never the same. So I ask: **How is that diverse sprinkling to be explained?** In the chart below, the eight readings form the first line, and below each reading I list the MSS that *ECM* gives as supporting each one. Since GA 18 and 35 have them all, of course, they are not listed. I will discuss the implications below, but first, the evidence (numbers with an asterisk are classed as Byzantine):
