The archetypal profile of **f**³⁵ in 1 Peter is defined by the 42 readings above. It is clear and unambiguous, so we have at least one objectively defined archetype in 1 Peter. In contrast, there are 24 + ?6 variant sets where **K**^x is seriously divided, placing an objectively defined archetype beyond our present reach. (I did not include a number of lesser splits—25%, 20%, 15%—that conceivably could complicate any attempt to come up with an archetype for **K**^x. Please go back to James for other comments.) Let's go on to 2 Peter.

The archetypal profile of **f**³⁵ in 2 Peter is defined by the 13 readings above. It is clear and unambiguous, so we have at least one objectively defined archetype in 2 Peter. **K**^x is in unusually good shape here, so the diagnostic readings are comparatively fewer. The 4 + ?2 variant sets where
