

$\mathfrak{f}^{35}$ B	1	
$\mathfrak{f}^{35}$ C	5	
$\mathfrak{f}^{35}$ 048	1	
$\mathfrak{f}^{35}$ P ²⁰ Σ	1	
$\mathfrak{f}^{35}$ P ¹⁰⁰ A	1	
$\mathfrak{f}^{35}$ ΣA	7	
$\mathfrak{f}^{35}$ ΣB	2	
$\mathfrak{f}^{35}$ AB	2	
$\mathfrak{f}^{35}$ AC	6	
$\mathfrak{f}^{35}$ P ¹⁰⁰ ΣA	1	
$\mathfrak{f}^{35}$ P ¹⁰⁰ AB	1	
$\mathfrak{f}^{35}$ P ¹⁰⁰ AC	1	
$\mathfrak{f}^{35}$ ΣAB	6	
$\mathfrak{f}^{35}$ ΣAC	2	
$\mathfrak{f}^{35}$ ΣBC	2	
$\mathfrak{f}^{35}$ ABC	2	
$\mathfrak{f}^{35}$ P ¹⁰⁰ ΣAB	1	
$\mathfrak{f}^{35}$ ΣABC	6	[Since this combination attests over 90% of the words, it is irrelevant to my present purpose and will not be used in any computations below.]
involving P ²⁰	1	
involving P ¹⁰⁰	7	
involving Σ	28	
involving A	37	
involving B	17	
involving C	18	
involving 048	1	

For the 114 relevant variant sets (120 minus 6), $\mathfrak{f}^{35}$ has overt attestation from these early uncials 52% of the time. Not only are these uncials obviously independent of each other, $\mathfrak{f}^{35}$ is independent of them as well, but just as early. Here is a further demonstration that $\mathfrak{f}^{35}$ is both early and independent. As we move to the next section, keep in mind that all by itself $\mathfrak{f}^{35}$ proves that a variant is early.

$\mathfrak{f}^{35}$ minority readings

A look at the apparatus of my Greek Text of James will show that I have designated as genuine nine readings with an attestation of 30% or less. In each case the deciding factor is the presence of $\mathfrak{f}^{35}$. I will now analyze these nine readings, beginning with the smallest percentage.
