

επειτα 4:14 [29.5%]

The roster of MSS here is quite similar to that of *γαρ*, but there are fewer. For all that, there are about 15 independent lines of transmission. Here again, this reading is certainly ancient, owing nothing to **K^x**, and in my opinion is most probably original.

νομου 1:23 [30%]

The roster here is a bit different. One independent line is shared with *ιθυνοντος*, three with *δυναμενος*, two with *ημων* and two with *γαρ*, which makes eight independent lines already. But there are six new lines of independent transmission added here that none of the others have. So in the fifth century, as I imagine, we have 14 independent lines (outside of **f³⁵**). By the time we get to the third century we should still, again, have at least six independent lines of transmission for *νομου*, not necessarily a perfect overlap with any of the others. There are some Byzantine MSS that obviously do not represent **K^x**, so again we have a reading that is certainly ancient while owing nothing to **K^x**. In my opinion it is most probably original.

λαμπραν εσθητα 2:3 [30%]

The roster here is quite similar to that of *γαρ*, etc., sharing one line with *ιθυνοντος* that none of the others have. It adds three new independent lines, so the evidence here is much like the others. Here again, this reading is certainly ancient, owing nothing to **K^x**, and in my opinion is most probably original.

Obviously the picture we have seen so far will be true for all other minority readings, as we move up to 35%, 40%, etc.

Conclusion

f³⁵ is ancient, and owes nothing to **K^x**. Q.E.D. Well, of course, not quite. I was not alive in the fifth century, nor the third, so I cannot prove that the picture I have painted, as to time, is correct. However, adding the evidence presented here to that presented in “When is a ‘recension’?”, I affirm with a clear conscience that most of the independent lines mentioned—*ιθυνοντος* 5, *δυναμενος* 16, *ημων* 9, *γαρ* 6, *νομου* 6, *λαμπραν εσθητα* 3, which equals **45**—most of them probably go back to the fifth century at least. It is highly unlikely that the 45 would reduce to fewer than 15 in the third century. [And these 15 all support **f³⁵** against **K^x**, at one point or another—by the same token at other points they go with **K^x** against **f³⁵**, so **K^x** is also ancient.] I invite attention to a word from Kilpatrick.
