

f ³⁵ B	4	
f ³⁵ C	3	
f ³⁵ ∓A	4	
f ³⁵ ∓B	1	
f ³⁵ ∓C	5	
f ³⁵ AB	4	
f ³⁵ AC	1	
f ³⁵ A048	2	
f ³⁵ BC	1	
f ³⁵ ∓AB	4	
f ³⁵ ∓AC	1	
f ³⁵ ∓A048	1	
f ³⁵ ∓BC	2	
f ³⁵ ABC	2	
f ³⁵ ∓ABC	3	[Since this combination attests over 90% of the words, it is irrelevant to my present purpose and will not be used in any computations below.]
involving ∓	28	
involving A	24	
involving B	18	
involving C	15	[C is missing from 4:3 to the end.]
involving 048	3	

For the 84 variant sets that are left (87 minus 3), f³⁵ has overt attestation from these early uncials 62% of the time. Not only are these uncials obviously independent of each other, f³⁵ is independent of them as well, but just as early. Here is a further demonstration that f³⁵ is both early and independent. As we move to the next section, keep in mind that all by itself f³⁵ proves that a variant is early.

f³⁵ minority readings

A look at my apparatus will show that I have designated as genuine four readings with an attestation of 30% or less. In each case the deciding factor is the presence of f³⁵. I will now analyze these four readings, beginning with the smallest percentage. First, here is a roster of the non-f³⁵ MSS (as per *ECM*) that attest each variant.

3:6 [20%] και	5:11 [24%] ο θεος ημιν	1:6 [29%] περιπατούμεν	3:24 [30%] --- εν
