As with James, there is no overlap between the first two columns, and only one MS in common between the 2nd and 3rd! It follows that **f**³⁵ is independent of all the lines of transmission represented by the MSS in those columns. There are no Byzantine MSS in the 1st column and only one (not very strong—69) in the 2nd. In contrast, the 3rd column has one very strong Byzantine MS (607), one strong one (180), two fair ones (0142, 1890), and two weak ones (1501, 1842); for all that, they obviously do not represent the bulk of the Byzantine tradition. As in James, **f**³⁵ is clearly early and independent of **K**^x. If it is independent of all other lines of transmission as well, as I believe, then it harks back to the Original—what other reasonable explanation is there?
